

TITAN TRAX SHIELD

NGI

ENGINEERED FOR SPORT

An aerial photograph of a tennis complex featuring several blue tennis courts with black surrounds. The courts are arranged in a grid-like pattern, separated by black safety fencing. The surrounding area includes green grass, trees, and a paved road with a few parked cars. The overall scene is bright and clear, suggesting a sunny day.

SUPERIOR PROTECTION.

**5 Year Warranty • Quick Renovation Economical • Moisture
Barrier • No Dead Spots • Long Term • Protective Shield**

ENGINEERED FOR SPORT

NGI TITANTRAX SHIELD

The TitanTrax Shield forms a long term cover over your court to fix the cracks and to make sure that new cracks do not appear.

***STRONGER.
BETTER.***

*WORKS **HARDER.**
GOES **FARTHER.***

Shield protects the pavement below from the elements and further deterioration.

Other repair processes, such as individual crack repair systems, treat only the small areas around the cracks on your tennis court. The entire court is then resurfaced to appear new. However, many times the repaired cracks will elongate and/or new cracks appear elsewhere on the tennis court after the repair (sometimes in less than a year). You may be left with new color and the same old crack problems.

The TitanTrax Shield is cost effective and better than any other crack repair method for a long term life cycle.
